課程目標 Objectives						
This course focuses on the practical aspect of data science in the real world. In the course, students will learn to engage in a real-world project requiring them to apply skills from the entire data science pipeline: preparing, organizing, and transforming data, constructing a model, and evaluating results. Moreover, high-level descriptions of how to apply deep learning for computer vision and natural language problems will also be covered.						
授課方式 Teaching methods						
Lecture. (1) All class assignments and projects will be in Python (we provide some tutorials for those who aren't as familiar with Python) (2) Be sure to wear the mask in class and follow the guidance of the school (3) We will have a Facebook group for discussion.
